NOTICE TO FILE MISSING PARTS OF PROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(c)

Filing Date Granted

An application number and filing date have been accorded to the above-identified provisional application. The items indicated below, however, are missing. Applicant is given **TWO MONTHS** from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee has not been received.
- Surcharge as set forth in 37 CFR 1.16(g) has not been received.

  The surcharge is due for late submission of filing fee or cover sheet.

SUMMARY OF FEES DUE:

The fee(s) required (including the fees noted above) are as follows. No entity status discount is in effect. If applicant is qualified for small entity status, a written assertion of small entity status must be submitted to establish small entity status. (See 37 CFR 1.27). If applicant is qualified for micro entity status, an acceptable Certification of Micro Entity Status must be submitted to establish micro entity status. (See 37 CFR 1.29 and forms PTO/SB/15A and 15B.)

- $**325** basic filing fee.
- $**65** surcharge.
- $(**0**) previous unapplied payment amount.
- $**390** TOTAL FEE BALANCE DUE.

Replies must be received in the USPTO within the set time period or must include a proper Certificate of Mailing or Transmission under 37 CFR 1.8 with a mailing or transmission date within the set time period. For more information and a suggested format, see Form PTO/SB/92, MPEP 512, and www.uspto.gov/incomplete-application.

Replies should be addressed to:

Mail Stop Missing Parts
Commissioner for Patents
P.O. Box 1450
Alexandria VA 22313-1450

REPLY VIA ELECTRONIC FILING

A reply may be submitted via electronic filing only by registered users of the appropriate USPTO patent electronic filing system and must include:

- A separate document having the document description, "**Applicant response to Pre-Exam Formalities Notice**"; and
- the item(s) for which a reply period is set forth above.

For more information about electronic filing, contact the Patent Electronic Business Center (EBC) 1-866-217-9197 or visit https://www.uspto.gov/ebc

NOTE: If the reply is not being submitted electronically, a copy of this notice must be included.

Questions about the contents of this notice and the requirements it sets forth should be directed to the Office of Data Management, Application Assistance Unit, at **(571) 272-4000** or **(571) 272-4200** or **1-888-786-0101**.

Receipt is acknowledged of this provisional patent application. It will not be examined for patentability and will become abandoned not later than twelve months after its filing date. Any correspondence concerning the application must include the following identification information: the U.S. APPLICATION NUMBER, FILING DATE, NAME OF FIRST INVENTOR, and TITLE OF INVENTION. Fees transmitted by check or draft are subject to collection.

Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please submit a written request for a corrected Filing Receipt identifying the requested changes, preferably by including a properly marked-up ADS showing the changes with strike-through for deletions and underlining for additions. If you received a "Notice to File Missing Parts" or other Notice requiring a response for this application, please submit any request for correction to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections provided that the request is grantable.

Title

Temporal Opportunity Window Prediction and Cost-Latency Optimization for Dynamic Node Orchestration

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications: No

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at http://www.uspto.gov/web/offices/pac/doc/general/index.html.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, http://www.stopfakes.gov. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4258).

LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184

Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as

set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign AssetsControl, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

SelectUSA

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The U.S. offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to promote and facilitate business investment. SelectUSA provides information assistance to the international investor community; serves as an ombudsman for existing and potential investors; advocates on behalf of U.S. cities, states, and regions competing for global investment; and counsels U.S. economic development organizations on investment attraction best practices. To learn more about why the United States is the best country in the world to develop technology, manufacture products, deliver services, and grow your business, visit http://www.SelectUSA.gov or call +1-202-482-6800.

Welcome to the U.S. Patent and Trademark Office (USPTO)

*Congratulations on taking the first step to protect your invention. You can now advertise or mark any products covered by this application for your invention as **"Patent Pending"** for as long as this application is pending!*

We are here to help you on the rest of your journey.

New to the process? The Patent Basics page will take you from "What is a patent?" to assistance with the application process.

PROVISIONAL PATENT APPLICATION

Temporal Opportunity Window Prediction and Cost-Latency Optimization for Dynamic Node Orchestration

HeadyTempo / The Opportunity Oracle (Patent Application 32)

Applicant / Assignee	HeadySystems Inc.
Inventor	Eric Haywood
Correspondence Address	149 Remington Street Unit 425, Fort Collins, CO 80524
Entity Status	Small
Government Interest	None known
Attorney Docket	N/A
Date	January 22, 2026

Note: This document is for a Provisional Patent

Abstract

[0001] A predictive scheduling engine for dynamic infrastructure orchestration determines an optimal temporal window for instantiating ephemeral execution nodes. The engine functions as a timing oracle for a node orchestrator, receiving multi-variate signals including cloud spot prices, energy prices and grid load, thermal headroom telemetry, hardware availability, and task urgency constraints. Using a look-ahead model, the engine identifies constructive opportunity windows in which resource availability, cost efficiency, and thermal capacity are jointly favorable. The engine returns a specific issuance timestamp rather than an immediate execution signal, enabling cost-latency arbitration, sustainability-aware scheduling, and market-maker behavior for internal compute resources.

Field of the Invention

[0002] This disclosure relates to cloud resource management, predictive auto-scaling, energy-aware computing, spot market arbitrage, and temporal optimization algorithms for compute orchestration.

Background

[0003] Modern orchestration systems commonly scale infrastructure reactively: nodes are created when demand is observed and removed when demand subsides. Reactive scaling fails to exploit short-lived pricing and energy opportunities that occur at sub-minute timescales, particularly in spot markets and variable-rate energy environments.

[0004] Cost and latency objectives frequently conflict. In many cases, delaying an execution by seconds can materially reduce cost, improve thermal reliability, or align with lower-carbon energy windows. Existing systems typically treat time as a passive variable rather than an active control input.

[0005] In a related system, a node orchestration layer (HeadyConductor, Patent 30) can instantiate nodes rapidly, and a runtime tuning layer (HeadyResonance, Patent 31) can adjust performance and power while a node is running. However, a missing element is a deterministic method for deciding when to initiate node issuance to maximize economic and thermodynamic efficiency while honoring task deadlines.

[0006] Accordingly, there is a need for a timing oracle that forecasts near-future cost and capacity conditions and issues an explicit timestamp for node instantiation, thereby improving efficiency without violating service-level objectives.

Summary

[0007] In one embodiment, a temporal opportunity prediction engine (HeadyTempo) continuously ingests one or more data streams: spot market prices, reserved and on-demand price curves, local energy prices, grid carbon intensity, hardware availability signals, thermal headroom telemetry from a tuning subsystem, and task urgency constraints derived from a scheduler or queue.

[0008] The engine computes a forecast across a configurable look-ahead horizon and identifies one or more constructive opportunity windows. A constructive opportunity window is a future time interval during which an aggregate objective function satisfies a target threshold or is locally optimal subject to constraints.

[0009] The engine implements wait-to-weight arbitration: a method that compares the estimated efficiency gain from waiting (arbitrage gain) against the estimated cost of delaying a task (latency penalty), producing a decision to execute now or at a future timestamp.

[0010] The engine exposes a handshake interface with a node orchestration layer. In response to a resource request, the engine returns a specific issuance timestamp, an optional confidence score, and optional constraints. The orchestration layer issues the node at the specified time and returns execution outcomes for feedback.

[0011] By treating time as a controllable optimization variable, the disclosed system reduces compute cost, increases thermal reliability, and aligns high-power jobs with favorable energy and carbon windows.

Brief Description of the Drawings

[0012] FIG. 1 illustrates a high-level architecture in which the HeadyTempo timing oracle ingests multi-variate signals and returns an issuance timestamp to the HeadyConductor orchestrator.

Detailed Description

[0013] The following description is provided to enable any person skilled in the art to make and use the disclosed embodiments. Various modifications will be apparent, and the principles described herein may be applied to other embodiments without departing from the scope of the disclosure.

[0014] The disclosed system may be implemented in software, firmware, hardware, or any combination thereof, and may be deployed in cloud environments, private data centers, edge environments, or hybrid topologies.

1. System Overview

[0015] In one embodiment, a timing oracle service executes as a control-plane component adjacent to a node orchestrator. The timing oracle receives requests to allocate compute resources and responds with a decision to allocate immediately or at a future issuance timestamp.

[0016] The timing oracle maintains one or more prediction models that estimate near-future conditions for: (i) compute price, (ii) energy price and carbon intensity, (iii) thermal headroom and cooling capacity, and (iv) hardware availability and failure probability.

[0017] The timing oracle outputs a temporal plan comprising one or more opportunity windows. Each opportunity window includes a start time, an end time, and an associated utility estimate. The plan may be recomputed continuously or upon significant state changes.

2. Input Signals

[0018] The system ingests pricing signals including spot market price snapshots, time-to-interruption distributions, and reserved or on-demand price baselines. Spot market prices may be obtained from provider APIs or from internal aggregators.

[0019] The system ingests energy and sustainability signals including real-time or forecast energy price, grid load indicators, and carbon intensity. These signals may be regional, node-local, or derived from a power distribution unit or facility telemetry.

[0020] The system ingests thermal telemetry including device temperature, cooling loop capacity, fan curves, and power caps. In one embodiment, thermal headroom is provided by a runtime tuning subsystem that exposes a normalized headroom metric in the range [0,1].

[0021] The system ingests hardware availability signals including GPU inventory, current utilization, reservation holds, maintenance windows, and observed failure rates. Availability may be represented as a probability of successful allocation within a time interval.

[0022] The system ingests task urgency constraints including deadlines, service-level objectives, priority classes, queue age, and expected runtime. Urgency constraints may include hard deadlines and soft penalties for delay.

3. Objective Function and Opportunity Windows

[0023] In one embodiment, the timing oracle evaluates candidate issuance times using an aggregate objective function that combines cost, energy, carbon, and thermal risk. Weights may be fixed, policy-driven, or learned.

[0024] A non-limiting example objective for a candidate issuance time t is: Score(t) = wp*Price(t) + we*Energy(t) + wc*Carbon(t) + wth*ThermalRisk(t) + wav*UnavailabilityRisk(t) + wl*LatencyPenalty(t), where lower score is preferred. ThermalRisk(t) may be computed from predicted headroom and expected workload power, and UnavailabilityRisk(t) may be computed from allocation probability and expected interruption cost.

[0025] A constructive opportunity window is identified when Score(t) falls below a threshold or forms a local minimum over a time interval, subject to constraints such as earliest start, latest start, and maximum wait.

[0026] Opportunity windows may be represented as discrete time slots (e.g., 1-second buckets) or continuous intervals. In discrete form, the system may compute Score for each slot in a look-ahead horizon and select the minimum feasible slot.

4. Wait-to-Weight Arbitration

[0027] The wait-to-weight logic determines whether to execute now or wait for a predicted opportunity window. The logic compares arbitrage gain against latency penalty, optionally adjusted for risk.

[0028] In one embodiment, arbitrage gain is computed as Gain = Score(now) - min_{t in feasible horizon} Score(t). Latency penalty may be modeled as Penalty = lambda * max(0, (t* - now) - slack), where lambda is a policy-derived penalty rate and slack is allowable delay before penalty accrues.

[0029] The system selects an issuance time t* that minimizes Score(t) subject to task constraints. If Gain exceeds Penalty and t* satisfies the task deadline, the system returns t*; otherwise the system returns now (or a near-term slot) to satisfy urgency requirements.

[0030] In a high-priority class, the system may impose a maximum wait bound and may elevate wl to favor immediate execution. In a low-priority class, the system may permit larger delays to maximize efficiency.

5. Example Decision Procedure (Non-Limiting)

```
[0031] inputs:
  request: {resource_type, quantity, deadline, priority, est_runtime}
  signals: {spot_prices, energy_price, carbon_intensity, thermal_headroom,
availability}
parameters:
  horizon_seconds, slot_seconds, weights wp,we,wc,wth,wav,wl

now = current_time()
candidate_slots = [now + k*slot_seconds for k in
0..horizon_seconds/slot_seconds]

feasible = [t for t in candidate_slots if t <= request.deadline]
if feasible is empty: return now

score(t) = wp*Price(t) + we*Energy(t) + wc*Carbon(t)
         + wth*ThermalRisk(t) + wav*UnavailabilityRisk(t)
         + wl*LatencyPenalty(t, request)

t_star = argmin_{t in feasible} score(t)
gain = score(now) - score(t_star)

penalty = LatencyPenalty(t_star, request)
if gain > penalty: return t_star
else: return now
```

6. Composer Handshake Protocol

[0032] In one embodiment, the timing oracle provides an API that receives a resource request from the orchestration layer and returns a response containing an issuance timestamp. The response may further include an identifier for the evaluated window, a confidence score, and constraints such as a maximum acceptable price or energy budget.

[0033] The orchestration layer issues the node at the returned timestamp. If the timestamp is in the future, the orchestration layer may place the request in a deferred queue and revalidate the timestamp when conditions change.

[0034] The timing oracle may support cancellation and re-planning. If the task urgency changes, if prices spike, or if thermal headroom declines, the oracle may return an updated issuance timestamp and the orchestration layer may revise its plan accordingly.

7. Forecasting and Model Selection

[0035] Forecasting may be performed using statistical models, machine learning models, or rule-based predictors. Non-limiting examples include exponential smoothing, autoregressive models, gradient-boosted decision trees, and neural sequence models.

[0036] In one embodiment, forecasts are computed for a short horizon (seconds to minutes) where near-term predictability is highest and where decision utility is greatest.

[0037] The system may maintain separate models per region, resource type, or hardware class, and may update model parameters online using observed outcomes and residual errors.

8. Feedback, Receipts, and Governance

[0038] In one embodiment, the orchestration layer returns execution outcomes to the timing oracle. Outcomes may include actual price paid, energy consumed, achieved latency, thermal events, and interruption or failure events. This feedback supports continuous calibration of forecasts and weights.

[0039] The system may emit auditable receipts for scheduling decisions, including inputs hashes, selected issuance timestamp, predicted gain, predicted penalty, and post-execution measured outcomes. Receipts may be signed and optionally timestamped to support governance and forensic analysis.

[0040] In one embodiment, the timing oracle operates under a deny-by-default policy for high-impact scheduling classes, such as allocating scarce GPU resources, and may require human approval to deviate from policy constraints in critical systems.

9. Example Use Cases

[0041] Spot market arbitrage for machine learning training jobs in which a short delay yields a material reduction in cost without violating the training schedule.

[0042] Thermal-aware issuance of GPU nodes in which a predicted cooling recovery interval is used to avoid thermal throttling and reduce failure risk.

[0043] Sustainability-aware batch processing in which the system aligns high-power workloads with lower-carbon or lower-price energy windows.

[0044] Burst handling for interactive tasks in which the maximum wait is bounded and the oracle prefers immediate issuance when latency risk exceeds predicted savings.

10. Alternative Embodiments

[0045] The objective function may include additional terms such as network congestion, storage I/O contention, or compliance constraints tied to data residency.

[0046] The oracle may allocate multiple nodes in a staggered temporal plan, returning a schedule of issuance times rather than a single timestamp.

[0047] The oracle may operate as a distributed service with local predictors per cluster and a global coordinator that arbitrages across clusters.

[0048] The oracle may integrate with a marketplace for internal capacity in which teams bid for capacity and the oracle clears bids in time based on predicted windows.

Example Claims (Non-Limiting)

[0049] Claims are not required for a provisional application. The following statements are provided as non-limiting examples of inventive aspects that may be claimed in a later non-provisional filing.

[0050] 1. A computer-implemented method comprising: continuously ingesting multi-variate infrastructure signals including compute price, energy price, thermal telemetry, hardware availability, and task urgency; computing a forecast over a look-ahead horizon; identifying a constructive opportunity window comprising a future time slot that optimizes an aggregate cost-benefit score; and returning, to an orchestration layer, an issuance timestamp for instantiating an execution node at the future time slot.

[0051] 2. The method of claim 1, further comprising computing a wait-to-weight decision by comparing an arbitrage gain from delaying issuance to a latency penalty for delaying issuance, and selecting the issuance timestamp based on the comparison.

[0052] 3. The method of claim 1, wherein the thermal telemetry includes a normalized thermal headroom metric produced by a runtime tuning subsystem, and wherein the aggregate cost-benefit score includes a thermal risk term derived from the thermal headroom metric.

[0053] 4. The method of claim 1, wherein returning the issuance timestamp comprises returning, instead of an immediate allow signal, a specific future timestamp or time interval for issuance, and wherein the orchestration layer defers issuance until the returned timestamp.

[0054] 5. The method of claim 1, further comprising receiving execution outcomes from the orchestration layer and updating at least one forecast model or weight parameter based on the execution outcomes.

[0055] 6. The method of claim 1, further comprising emitting a signed receipt that records at least a request hash, the issuance timestamp, forecasted gain and penalty values, and post-execution measured outcomes.

Drawings

[0056] FIG. 1 is provided as an example architecture diagram of the disclosed timing oracle and its integration points.

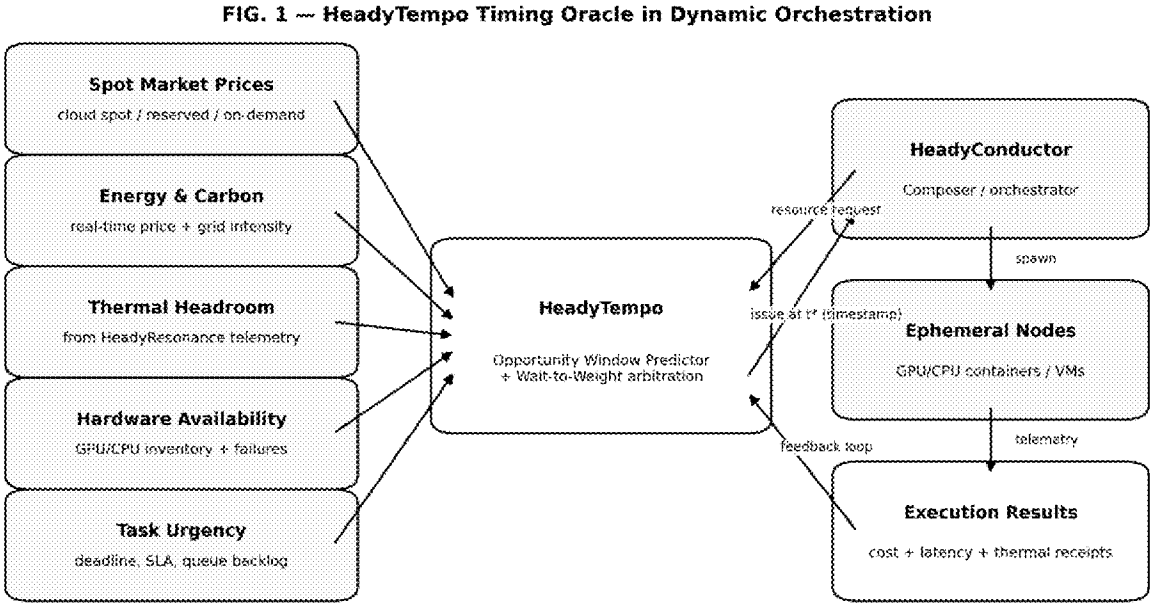

FIG. 1 — HeadyTempo Timing Oracle integration (non-limiting example).

of benefit claims: 0

This section allows for the applicant to either claim benefit under 35 U.S.C. 119(e), 120, 121, or 365(c), 386(c), or indicate National Stage entry from a PCT application. Providing benefit claim information in the Application Data Sheet constitutes the specific reference required by 35 U.S.C. 119(e) or 120, and 37 CFR 1.78(a)(2) or CFR 1.78(a)(4), and need not otherwise be made part of the specification.

Data was not provided for this section.

Foreign Priority Information

of foreign priority claims: 0

This section allows for the applicant to claim benefit of foreign priority and to identify any prior foreign application for which priority is not claimed. Providing this information in the Application Data Sheet constitutes the claim for priority as required by 35 U.S.C. 119 (b) and 37 CFR 1.55. When priority is claimed to a foreign application that is eligible for retrieval under the priority document exchange program (PDX) the information will be used by the Office to automatically attempt retrieval pursuant to 37 CFR 1.55(i)(1) and (2). Under the PDX program, applicant bears the ultimate responsibility for ensuring that a

copy of the foreign application is received by the Office from the participating foreign intellectual property office, or a certified copy of the foreign priority application is filed, within the time period specified in 37 CFR 1.55(g)(1).

Data was not provided for this section.

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications

Checking this box will cause the application to be examined under the first inventor to file provisions of the AIA.

☐ This application (1) claims priority to or the benefit of an application filed before March 16, 2013 and (2) also contains, or contained at any time, a claim to a claimed invention that has an effective filing date on or after March 16, 2013. NOTE: By providing this statement under 37 CFR 1.55 or 1.78, this application, with a filing date on or after March 2016, 2013, will be examined under the first inventor to file provisions of the AIA.

Authorization or Opt-Out of Authorization to Permit Access

When this Application Data Sheet is properly signed and filled with the application, applicant has provided written authority to permit a participating foreign intellectual property (IP) office access to the instant application-as-filed (see paragraph A in subsection 1 below) and the European Patent Office (EPO) access to any search results from the instant application (see paragraph B in subsection 1 below).

Should applicant choose not to provide an authorization identified in subsection 1 below, applicant **must opt-out** of the authorization by checking the corresponding box A or B or both in subsection 2 below.

NOTE:
This section of the Application Data Sheet is **ONLY** reviewed and processed with the **INITIAL** filing of an application. After the initial filing of an application, an Application Data Sheet cannot be used to provide or rescind authorization for access by a foreign IP office(s). Instead, Form PTO/SB/39 or PTO/SB/69 must be used as appropriate.

1. Authorization to Permit Access by a Foreign Intellectual Property Office(s)

A. **Priority Document Exchange (PDX)**
Unless box A in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the European Patent Office (EPO), the Japan Patent Office (JPO), the Korean Intellectual Property Office (KIPO), the China National Intellectual Property Administration (CNIPA), the World Intellectual Property Organization (WIPO), and any other foreign intellectual property office participating with the USPTO in a bilateral or multilateral priority document exchange agreement in which a foreign application claiming priority to the instant patent application is filed, access to: (1) the instant patent application-as-filed and its related bibliographic data, (2) any foreign or domestic application to which priority or benefit is claimed by the instant application and its

related bibliographic data, and (3) the date of filing of this Authorization. See 37 CFR 1.14(h) (1).

B. **Search Results from U.S. Application to EPO**
Unless box B in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the EPO access to the bibliographic data and search results from the instant patent application when a European patent application claiming priority to the instant patent application is filed. See 37 CFR 1.14(h)(2).

The applicant is reminded that the EPO's Rule 141(1) EPC (European Patent Convention) requires applicants to submit a copy of search results from the instant application without delay in a European patent application that claims priority to the instant application.

2. Opt-Out of Authorizations to Permit Access by a Foreign Intellectual Property Office(s)

☐ A. Applicant **DOES NOT** authorize the USPTO to permit a participating foreign IP office access to the instant application-as-filed. If this box is checked, the USPTO will not be providing a participating foreign IP office with any documents and information identified in subsection 1A above.

☐ B. Applicant **DOES NOT** authorize the USPTO to transmit to the EPO any search results from the instant patent application. If this box is checked, the USPTO will not be providing the EPO with the search results from the instant application.

NOTE:
Once the application has published or is otherwise publicly available, the USPTO may provide access to the application in accordance with 37 CFR 1.14.

Applicant Information

of applicants: 1

The information to be provided in this section is the name and address of the legal representative who is the applicant under 37 CFR 1.43; or the name and address of the assignee, person to whom the inventor is under an obligation to assign the invention, or person who otherwise shows sufficient proprietary interest in the matter who is the applicant under 37 CFR 1.46.

NOTE:

This Application Data Sheet must be signed in accordance with 37 CFR 1.33(b). **However, if this Application Data Sheet is submitted with the INITIAL filing of the application and either box A or B is not checked in subsection 2 of the "Authorization or Opt-Out of Authorization to Permit Access" section, then this form must also be signed in accordance with 37 CFR 1.14(c)**

This Application Data Sheet **must** be signed by a patent practitioner if one or more of the applicants is a **juristic entity** (e.g., corporation or association). If the applicant is two or more joint inventors, this form must be signed by a patent practitioner, **all** joint inventors who are the applicant, or one or more joint inventor-applicants who have been given power of attorney (e.g., see USPTO Form PTO/AIA/81) on behalf of **all** joint inventor-applicants.

See CFR 1.4(d) for the manner of making signatures and certifications.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.
