Improper Submission of Authorization to Permit Access to Application by Participating Offices under 37 CFR 1.14(h)(1) (Priority Document Exchange)

The Authorization to Permit Access to Application-As-Filed by Participating Offices under 37 CFR 1.14(h)(1) (authorization to permit access to application via priority document exchange) submitted on 01/22/2026 in the above-identified application is not accepted because:

- It was not properly signed. If applicant still wishes to provide authorization to permit access under 37 CFR 1.14(h)(1), applicant must submit a properly signed authorization (e.g., PTO/SB/39).

Any authorization should be submitted prior to filing a subsequent foreign application with a participating intellectual property office in which priority is claimed to the above-identified U.S. application to ensure that it is likely that the participating foreign intellectual property office will be successful in its attempt to retrieve a copy of the U.S. priority application from the Office.

Questions about the contents of this notice and the requirements it sets forth should be directed to the Office of Data Management, Application Assistance Unit, at **(571) 272-4000** or **(571) 272-4200** or **1-888-786-0101**.

NOTICE TO FILE MISSING PARTS OF PROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(c)

Filing Date Granted

An application number and filing date have been accorded to the above-identified provisional application. The items indicated below, however, are missing. Applicant is given **TWO MONTHS** from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- A provisional application cover sheet was not provided for this application. The provisional application cover sheet under 37 CFR 1.51(c)(1), which may be an application data sheet (37 CFR 1.76), is required identifying the application as a provisional application and providing the name of each inventor, either city and state, or city and foreign country, of the residence of each inventor, and the title of the invention.

  If the applicant wishes to submit an ADS to satisfy the cover sheet requirement, the ADS must be properly signed and properly marked up in compliance with 37 CFR 1.76(c), i.e. identifying the information that is being changed, with underlining for insertions, and strike-through or brackets for text removed.
- The statutory basic filing fee has not been received.
- Surcharge as set forth in 37 CFR 1.16(g) has not been received.

  The surcharge is due for late submission of filing fee or cover sheet.

SUMMARY OF FEES DUE:

The fee(s) required (including the fees noted above) are as follows. No entity status discount is in effect. If applicant is qualified for small entity status, a written assertion of small entity status must be submitted to establish small entity status. (See 37 CFR 1.27). If applicant is qualified for micro entity status, an acceptable Certification of Micro Entity Status must be submitted to establish micro entity status. (See 37 CFR 1.29 and forms PTO/SB/15A and 15B.)

- $**325** basic filing fee.
- $**65** surcharge.
- $(**0**) previous unapplied payment amount.
- $**390** TOTAL FEE BALANCE DUE.

Applicant is notified that the above-identified application contains the deficiencies noted below. No period for reply is set forth in this Notice for correction of these deficiencies. However, if a deficiency relates to the inventor's oath or declaration, the applicant must file an oath or declaration in compliance with 37 CFR 1.63, or a substitute

statement in compliance with 37 CFR 1.64, executed by or with respect to each actual inventor no later than the expiration of the time period set in the "Notice of Allowability" to avoid abandonment. See 37 CFR 1.53(f).

Items Required To Avoid Processing Delays:

The deficiencies indicated below should be addressed promptly to avoid further processing delays.

- If an ADS was not properly signed upon filing of the application, any ADS submitted after filing of the application must be properly marked up relative to the information of record. Information of record can generally be found on the latest filing receipt.

How to Make Changes in the Information of Record Using a Corrected Application Data Sheet: In order to make changes to the information of record, an ADS must be properly signed and properly marked up relative to the current information of record.

Proper signature: The ADS must be signed with a handwritten signature or proper S-signature by:

- A patent practitioner, with the practitioner's registration number accompanying the signature (e.g., immediately below or adjacent to the signature), or
- The applicant, if the applicant is an individual other than the inventor(s) and no power of attorney has been appointed, or
- All of the inventors, if no other applicant has been established and no power of attorney has been appointed.

A proper S-signature consists of only letters and/or Arabic numerals, with appropriate spaces and commas, periods, apostrophes, or hyphens for punctuation contained between a first single forward slash mark before, and a second single forward slash mark after, the S-signature.

Proper markings: The ADS must identify the changes being made with underlining for insertions and strike-through or brackets for text removed relative to the information of record. No other markings or indications are acceptable. Where an ADS providing corrected or updated information does not contain all of the sections of the ADS, the entire section (including the heading) in which changes are being made must be included in the ADS. Information of record can generally be found on the latest filing receipt.

Replies must be received in the USPTO within the set time period or must include a proper Certificate of Mailing or Transmission under 37 CFR 1.8 with a mailing or transmission date within the set time period. For more information and a suggested format, see Form PTO/SB/92, MPEP 512, and www.uspto.gov/incomplete-application.

Replies should be addressed to:

Mail Stop Missing Parts
Commissioner for Patents
P.O. Box 1450
Alexandria VA 22313-1450

REPLY VIA ELECTRONIC FILING

A reply may be submitted via electronic filing only by registered users of the appropriate USPTO patent electronic filing system and must include:

- A separate document having the document description, "**Applicant response to Pre-Exam Formalities Notice**"; and
- the item(s) for which a reply period is set forth above.

For more information about electronic filing, contact the Patent Electronic Business Center (EBC) 1-866-217-9197 or visit https://www.uspto.gov/ebc

NOTE: If the reply is not being submitted electronically, a copy of this notice must be included.

Questions about the contents of this notice and the requirements it sets forth should be directed to the Office of Data Management, Application Assistance Unit, at **(571) 272-4000** or **(571) 272-4200** or **1-888-786-0101**.

Date Mailed: 02/26/2026

Receipt is acknowledged of this provisional patent application. It will not be examined for patentability and will become abandoned not later than twelve months after its filing date. Any correspondence concerning the application must include the following identification information: the U.S. APPLICATION NUMBER, FILING DATE, NAME OF FIRST INVENTOR, and TITLE OF INVENTION. Fees transmitted by check or draft are subject to collection.

Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please submit a written request for a corrected Filing Receipt identifying the requested changes, preferably by including a properly marked-up ADS showing the changes with strike-through for deletions and underlining for additions. If you received a "Notice to File Missing Parts" or other Notice requiring a response for this application, please submit any request for correction to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections provided that the request is grantable.

Governance-Wrapped Autonomous Engineering Agent with Ephemeral Context Injection and RAA-Enforced Tool Execution

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications: No

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at http://www.uspto.gov/web/offices/pac/doc/general/index.html.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, http://www.stopfakes.gov. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4258).

LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184

Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as

set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign AssetsControl, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

SelectUSA

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The U.S. offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to promote and facilitate business investment. SelectUSA provides information assistance to the international investor community; serves as an ombudsman for existing and potential investors; advocates on behalf of U.S. cities, states, and regions competing for global investment; and counsels U.S. economic development organizations on investment attraction best practices. To learn more about why the United States is the best country in the world to develop technology, manufacture products, deliver services, and grow your business, visit http://www.SelectUSA.gov or call +1-202-482-6800.

Welcome to the U.S. Patent and Trademark Office (USPTO)

*Congratulations on taking the first step to protect your invention. You can now advertise or mark any products covered by this application for your invention as **"Patent Pending"** for as long as this application is pending!*

We are here to help you on the rest of your journey.

New to the process? The Patent Basics page will take you from "What is a patent?" to assistance with the application process.

- **www.uspto.gov/PatentBasics**

Consider cost savings. You might qualify for small entity or micro entity status, which means a discount on most USPTO patent fees.

- **www.uspto.gov/EntityStatus**

Become a registered electronic filer (eFiler). You'll gain access to the full capabilities of Patent Center. As a registered eFiler, you can electronically view your submission, track the progress of your application, and respond to USPTO correspondence.

- **www.uspto.gov/NewPatentFilers**

Learn how to identify which of your creative ideas might be intellectual property assets and how to protect them by using the USPTO Intellectual Property (IP) Identifier.

- **ipidentifier.uspto.gov**

We also provide Pro Se Assistance, support specifically geared for **independent inventors without an attorney or agent.** Follow the link below, call us at 866-767-3848, or email **proseassistancecenter@uspto.gov**.

- **www.uspto.gov/ProSePatents**

Need help near you? We have regional offices across the country, as well as Patent and Trademark Resource Centers in libraries in nearly every state, with specialists standing by to help you at no cost.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Application Data Sheet 37 CFR 1.76

The Application Data Sheet is part of the provisional or non-provisional application for which it is being submitted. The following form contains the bibliographic data arranged in a format specified by the United States Patent and Trademark Office as outlined in 37 CFR 1.76.

Inventor Information

of inventors: 1

1. **Eric Haywood**

Application type	Provisional Application under 35 USC 111(b)
Subject matter	Utility
Total number of drawing sheets	---
Filing by reference	No

Representative Information

of representatives: 0

Representative information should be provided for all practitioners having a power of attorney in the application. Providing this information in the Application Data Sheet does not constitute a power of attorney in the application (see 37 CFR 1.32).

Data was not provided for this section.

Domestic Benefit/National Stage Information

of benefit claims: 0

This section allows for the applicant to either claim benefit under 35 U.S.C. 119(e), 120, 121, or 365(c), 386(c), or indicate National Stage entry from a PCT application. Providing benefit claim information in the Application Data Sheet constitutes the specific reference required by 35 U.S.C. 119(e) or 120, and 37 CFR 1.78(a)(2) or CFR 1.78(a)(4), and need not otherwise be made part of the specification.

Data was not provided for this section.

Foreign Priority Information

of foreign priority claims: 0

This section allows for the applicant to claim benefit of foreign priority and to identify any prior foreign application for which priority is not claimed. Providing this information in the Application Data Sheet constitutes the claim for priority as required by 35 U.S.C. 119 (b) and 37 CFR 1.55. When priority is claimed to a foreign application that is eligible for retrieval under the priority document exchange program (PDX) the information will be used by the Office to automatically attempt retrieval pursuant to 37 CFR 1.55(i)(1) and (2). Under the PDX program, applicant bears the ultimate responsibility for ensuring that a

copy of the foreign application is received by the Office from the participating foreign intellectual property office, or a certified copy of the foreign priority application is filed, within the time period specified in 37 CFR 1.55(g)(1).

Data was not provided for this section.

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications

Checking this box will cause the application to be examined under the first inventor to file provisions of the AIA.

☐ This application (1) claims priority to or the benefit of an application filed before March 16, 2013 and (2) also contains, or contained at any time, a claim to a claimed invention that has an effective filing date on or after March 16, 2013. NOTE: By providing this statement under 37 CFR 1.55 or 1.78, this application, with a filing date on or after March 2016, 2013, will be examined under the first inventor to file provisions of the AIA.

Authorization or Opt-Out of Authorization to Permit Access

When this Application Data Sheet is properly signed and filled with the application, applicant has provided written authority to permit a participating foreign intellectual property (IP) office access to the instant application-as-filed (see paragraph A in subsection 1 below) and the European Patent Office (EPO) access to any search results from the instant application (see paragraph B in subsection 1 below).

Should applicant choose not to provide an authorization identified in subsection 1 below, applicant **must opt-out** of the authorization by checking the corresponding box A or B or both in subsection 2 below.

NOTE:
This section of the Application Data Sheet is **ONLY** reviewed and processed with the **INITIAL** filing of an application. After the initial filing of an application, an Application Data Sheet cannot be used to provide or rescind authorization for access by a foreign IP office(s). Instead, Form PTO/SB/39 or PTO/SB/69 must be used as appropriate.

1. Authorization to Permit Access by a Foreign Intellectual Property Office(s)

A. **Priority Document Exchange (PDX)**
Unless box A in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the European Patent Office (EPO), the Japan Patent Office (JPO), the Korean Intellectual Property Office (KIPO), the China National Intellectual Property Administration (CNIPA), the World Intellectual Property Organization (WIPO), and any other foreign intellectual property office participating with the USPTO in a bilateral or multilateral priority document exchange agreement in which a foreign application claiming priority to the instant patent application is filed, access to: (1) the instant patent application-as-filed and its related bibliographic data, (2) any foreign or domestic application to which priority or benefit is claimed by the instant application and its

related bibliographic data, and (3) the date of filing of this Authorization. See 37 CFR 1.14(h) (1).

B. **Search Results from U.S. Application to EPO**
Unless box B in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the EPO access to the bibliographic data and search results from the instant patent application when a European patent application claiming priority to the instant patent application is filed. See 37 CFR 1.14(h)(2).

The applicant is reminded that the EPO's Rule 141(1) EPC (European Patent Convention) requires applicants to submit a copy of search results from the instant application without delay in a European patent application that claims priority to the instant application.

2. Opt-Out of Authorizations to Permit Access by a Foreign Intellectual Property Office(s)

☐ A. Applicant **DOES NOT** authorize the USPTO to permit a participating foreign IP office access to the instant application-as-filed. If this box is checked, the USPTO will not be providing a participating foreign IP office with any documents and information identified in subsection 1A above.

☐ B. Applicant **DOES NOT** authorize the USPTO to transmit to the EPO any search results from the instant patent application. If this box is checked, the USPTO will not be providing the EPO with the search results from the instant application.

NOTE:
Once the application has published or is otherwise publicly available, the USPTO may provide access to the application in accordance with 37 CFR 1.14.

Applicant Information

of applicants: 1

The information to be provided in this section is the name and address of the legal representative who is the applicant under 37 CFR 1.43; or the name and address of the assignee, person to whom the inventor is under an obligation to assign the invention, or person who otherwise shows sufficient proprietary interest in the matter who is the applicant under 37 CFR 1.46.

Governance-Wrapped Autonomous Engineering Agent with Ephemeral Context Injection and RAA-Enforced Tool Execution

Patent Application 28: HeadyGoose_Integration

Applicant / Assignee	HeadySystems Inc.
Inventor	Eric Haywood
Correspondence Address	149 Remington Street Unit 425, Fort Collins CO 80524
Entity Status	Small Entity
Government Interest	None known
Attorney Docket	HS-PPA-28-HeadyGoose
Date	January 21, 2026
U.S. Provisional Application No.	[To be assigned]

Abstract

A system for securing autonomous engineering agents employs a governance wrapper architecture that intercepts an agent's tool-use intent and routes the intent through a Risk, Authorization, and Attestation (RAA) execution fabric. Unlike standard agents with broad local access, the system injects an ephemeral governance context into the agent's prompt window to constrain visible scope and permissible actions based on real-time risk assessment and trust level. The system further enforces a two-key commit protocol in which agent-generated code changes cannot be merged into a protected branch without a cryptographic counter-signature from a human operator or deterministic policy engine, enabling enterprise-safe autonomous engineering with auditable, governed execution.

Field of the Invention

[0001] The invention relates to autonomous software engineering agents, AI agent governance, secure DevOps automation, and human-in-the-loop coding assistants. More particularly, it relates to governance-wrapped agent architectures that mediate tool execution using risk/authorization/attestation signals, constrain agent context using ephemeral policy injection, and gate code promotion using dual-signature version control enforcement.

Background

[0002] Agentic software engineering systems can plan and execute sequences of tool actions such as editing files, running tests, modifying infrastructure, and opening pull requests. In enterprise environments, unfettered agent access creates unacceptable risk of unauthorized data access, destructive changes, supply-chain compromise, and compliance violations.

[0003] Conventional access control systems are frequently coarse-grained, relying on long-lived credentials and static roles that fail to reflect action-specific risk or device posture. Further, even when permissions exist, the agent's prompt context often exposes sensitive repository or environment details that exceed the minimum necessary for the current task.

[0004] A practical enterprise-safe architecture requires per-intent governance of tool execution, dynamic restriction of what the agent can see and do at a given moment, and cryptographically enforced change-control so that autonomous changes cannot enter protected branches without explicit countersigning authority.

[0005] Organizations adopting autonomous agents want deterministic, auditable controls that function as a safety suit around the agent runtime rather than relying on informal policies or best-effort guardrails.

Summary

[0006] In one embodiment, a governance wrapper intercepts tool-use intents issued by an autonomous engineering agent, canonicalizes each intent, and validates the intent against an external RAA execution fabric prior to execution.

[0007] In one embodiment, an ephemeral governance context injector dynamically modifies the agent's system prompt and tool-visible scope based on real-time risk assessment, trust level, and attestation signals.

[0008] In one embodiment, a two-key commit mechanism prevents agent-generated code from being merged into protected branches unless a cryptographic counter-signature is provided by a human operator or deterministic policy engine.

[0009] In one embodiment, the system produces audit receipts binding intent hashes, attestation digests, evaluation results, and approval signatures, enabling compliance evidence and incident response.

Brief Description of the Drawings

[0010] FIG. 1 is a schematic block diagram illustrating a governance-wrapped autonomous engineering agent architecture with RAA-enforced tool execution, ephemeral context injection, and a two-key commit gate.

Detailed Description

Overview

[0011] In an example implementation, an autonomous engineering agent proposes actions via a tool interface. Rather than allowing direct tool execution, the agent submits intents to a governance wrapper. The wrapper evaluates each intent using an RAA evaluator that combines risk classification, authorization claims, and attestation evidence about the execution environment. Only approved intents are executed within a scoped sandbox. Code changes are promoted through a two-key commit gate requiring a counter-signature to merge into protected branches.

Governance Wrapper

[0012] The governance wrapper is a middleware component positioned between an agent runtime and execution tools such as filesystem mutation, shell commands, build/test runners, package managers, cloud APIs, and version control operations.

[0013] The wrapper receives an intent record comprising tool identifier, verb, arguments, target resources, and context snapshot. The wrapper canonicalizes the intent into a stable representation and computes an intent digest for audit and policy enforcement.

[0014] The wrapper classifies risk using tool category, target sensitivity, change magnitude, and policy rules. High-risk intents can be suspended pending step-up authorization or explicit approval workflows.

[0015] For approved intents, the wrapper issues or requests scoped execution tokens and routes the intent into constrained adapters that enforce least privilege.

RAA-Enforced Tool Execution

[0016] The RAA execution fabric evaluates each intent using risk, authorization, and attestation signals. Risk may be derived from operation type and targets; authorization from identity claims and project roles; attestation from verified execution environment posture.

[0017] Upon approval, the fabric issues an ephemeral execution token bound to intent digest, scope, and validity window. The scoped tool adapter enforces token scope at runtime and rejects requests that exceed scope or timing.

[0018] Tokens can be revoked in real time upon posture changes or policy violations, causing in-flight operations to halt.

Ephemeral Governance Context Injection

[0019] The system injects an ephemeral governance context into the agent's prompt window to constrain the agent's visible scope and permissible behaviors. The injected context can specify allowed repositories, allowed file roots, prohibited paths, API allowlists, maximum diff size, and required test suites.

[0020] Unlike static prompts, the governance context is computed per session and can change per intent or phase. A low-trust state may expose only read-only docs and tests; a higher-trust state may permit limited writes to a feature branch within a confined subtree.

[0021] The injected context can be cryptographically signed and time-bounded so the wrapper can reject tool intents lacking a valid context bundle, preventing prompt tampering or stale policy reuse.

Two-Key Commit Gate

[0022] The two-key commit mechanism prevents autonomous code alterations from entering protected branches without dual authorization. The agent may generate changes on a feature branch and open a pull request, but merge into a protected branch requires an agent signature over the commit/diff hash and a counter-signature by a human operator or deterministic policy engine.

[0023] The counter-signature is produced after evaluating tests, static analysis, security scans, and governance policy checks. A merge receipt binds commit hash, evaluation artifacts, and approval signatures into an immutable record.

[0024] This mechanism decouples code generation from promotion authority, enabling autonomous development workflows while preserving governance-grade change control.

Example Workflow

[0025] A user assigns the agent a ticket. The agent receives a restricted context bundle and a limited tool allowlist appropriate to the task and trust level.

[0026] The agent proposes edits; each intent is intercepted, risk-classified, and either executed in a scoped sandbox or suspended pending approval.

[0027] The agent runs tests via the wrapper; results are logged and hashed.

[0028] When ready, the agent opens a pull request. The two-key gate blocks merge until a counter-signature is provided after evaluation and policy checks.

[0029] Upon countersignature, the protected branch is updated and a signed receipt is stored for audit.

Alternative Embodiments

[0030] In some embodiments, the governance wrapper runs locally as a daemon with OS-level sandboxing; in other embodiments it runs as a remote service mediating tool calls over a secure channel.

[0031] In some embodiments, the two-key commit requires two human signatures for high-risk repositories or infrastructure changes.

[0032] In some embodiments, the RAA evaluator integrates with enterprise device management and identity providers to incorporate compliance posture signals.

Drawings

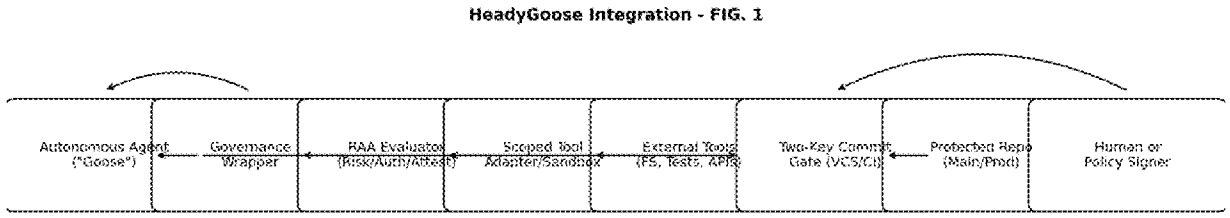

FIG. 1 - Governance-wrapped autonomous engineering agent with RAA mediation, context injection, and two-key commit gating.

Example Claims

The following claims are provided as example claims and may be revised for a later non-provisional filing.

1. A governance wrapper middleware layer configured to intercept autonomous agent tool calls and validate the tool calls against an external risk, authorization, and attestation (RAA) policy prior to execution.

2. A method for dynamically modifying an agent system prompt to enforce strict, context-aware boundary conditions based on real-time risk assessment, including read-only or prohibited access to specified resources.

3. A version control enforcement mechanism requiring dual cryptographic signatures (agent plus human operator or deterministic policy engine) for merging any code alteration into a protected branch.

4. A system comprising: the governance wrapper; an RAA evaluator; a scoped tool adapter; an ephemeral context injector; and a two-key commit gate configured to perform the method of claim 1.

5. A non-transitory computer readable medium storing instructions to perform the method of claim 1.
