Date Mailed: 02/26/2026

NOTICE TO FILE MISSING PARTS OF PROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(c)

Filing Date Granted

An application number and filing date have been accorded to the above-identified provisional application. The items indicated below, however, are missing. Applicant is given **TWO MONTHS** from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee has not been received.
- Surcharge as set forth in 37 CFR 1.16(g) has not been received.

  The surcharge is due for late submission of filing fee or cover sheet.

SUMMARY OF FEES DUE:

The fee(s) required (including the fees noted above) are as follows. No entity status discount is in effect. If applicant is qualified for small entity status, a written assertion of small entity status must be submitted to establish small entity status. (See 37 CFR 1.27). If applicant is qualified for micro entity status, an acceptable Certification of Micro Entity Status must be submitted to establish micro entity status. (See 37 CFR 1.29 and forms PTO/SB/15A and 15B.)

- $**325** basic filing fee.
- $**65** surcharge.
- $(**0**) previous unapplied payment amount.
- $**390** TOTAL FEE BALANCE DUE.

Replies must be received in the USPTO within the set time period or must include a proper Certificate of Mailing or Transmission under 37 CFR 1.8 with a mailing or transmission date within the set time period. For more information and a suggested format, see Form PTO/SB/92, MPEP 512, and www.uspto.gov/incomplete-application.

Replies should be addressed to:

Mail Stop Missing Parts
Commissioner for Patents
P.O. Box 1450
Alexandria VA 22313-1450

REPLY VIA ELECTRONIC FILING

A reply may be submitted via electronic filing only by registered users of the appropriate USPTO patent electronic filing system and must include:

- A separate document having the document description, "**Applicant response to Pre-Exam Formalities Notice**"; and
- the item(s) for which a reply period is set forth above.

For more information about electronic filing, contact the Patent Electronic Business Center (EBC) 1-866-217-9197 or visit https://www.uspto.gov/ebc

NOTE: If the reply is not being submitted electronically, a copy of this notice must be included.

Questions about the contents of this notice and the requirements it sets forth should be directed to the Office of Data Management, Application Assistance Unit, at **(571) 272-4000** or **(571) 272-4200** or **1-888-786-0101**.

Date Mailed: 02/26/2026

Receipt is acknowledged of this provisional patent application. It will not be examined for patentability and will become abandoned not later than twelve months after its filing date. Any correspondence concerning the application must include the following identification information: the U.S. APPLICATION NUMBER, FILING DATE, NAME OF FIRST INVENTOR, and TITLE OF INVENTION. Fees transmitted by check or draft are subject to collection.

Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please submit a written request for a corrected Filing Receipt identifying the requested changes, preferably by including a properly marked-up ADS showing the changes with strike-through for deletions and underlining for additions. If you received a "Notice to File Missing Parts" or other Notice requiring a response for this application, please submit any request for correction to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections provided that the request is grantable.

Early Publication Request: No

Title

Microgravity Resonance Stabilization via Spectral Mode Identification and Phase-Locked Counteractuation (HeadySpace)

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications: No

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at http://www.uspto.gov/web/offices/pac/doc/general/index.html.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, http://www.stopfakes.gov. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4258).

LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184

Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as

set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign AssetsControl, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

SelectUSA

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The U.S. offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to promote and facilitate business investment. SelectUSA provides information assistance to the international investor community; serves as an ombudsman for existing and potential investors; advocates on behalf of U.S. cities, states, and regions competing for global investment; and counsels U.S. economic development organizations on investment attraction best practices. To learn more about why the United States is the best country in the world to develop technology, manufacture products, deliver services, and grow your business, visit http://www.SelectUSA.gov or call +1-202-482-6800.

Welcome to the U.S. Patent and Trademark Office (USPTO)

*Congratulations on taking the first step to protect your invention. You can now advertise or mark any products covered by this application for your invention as **"Patent Pending"** for as long as this application is pending!*

We are here to help you on the rest of your journey.

New to the process? The Patent Basics page will take you from "What is a patent?" to assistance with the application process.

- **www.uspto.gov/PatentBasics**

Consider cost savings. You might qualify for small entity or micro entity status, which means a discount on most USPTO patent fees.

- **www.uspto.gov/EntityStatus**

Become a registered electronic filer (eFiler). You'll gain access to the full capabilities of Patent Center. As a registered eFiler, you can electronically view your submission, track the progress of your application, and respond to USPTO correspondence.

- **www.uspto.gov/NewPatentFilers**

Learn how to identify which of your creative ideas might be intellectual property assets and how to protect them by using the USPTO Intellectual Property (IP) Identifier.

Application type	Provisional Application under 35 USC 111(b)
Subject matter	Utility
Total number of drawing sheets	---
Filing by reference	No

Representative Information

of representatives: 0

Representative information should be provided for all practitioners having a power of attorney in the application. Providing this information in the Application Data Sheet does not constitute a power of attorney in the application (see 37 CFR 1.32).

Data was not provided for this section.

Domestic Benefit/National Stage Information

of benefit claims: 0

This section allows for the applicant to either claim benefit under 35 U.S.C. 119(e), 120, 121, or 365(c), 386(c), or indicate National Stage entry from a PCT application. Providing benefit claim information in the Application Data Sheet constitutes the specific reference required by 35 U.S.C. 119(e) or 120, and 37 CFR 1.78(a)(2) or CFR 1.78(a)(4), and need not otherwise be made part of the specification.

Data was not provided for this section.

Foreign Priority Information

of foreign priority claims: 0

This section allows for the applicant to claim benefit of foreign priority and to identify any prior foreign application for which priority is not claimed. Providing this information in the Application Data Sheet constitutes the claim for priority as required by 35 U.S.C. 119 (b) and 37 CFR 1.55. When priority is claimed to a foreign application that is eligible for retrieval under the priority document exchange program (PDX) the information will be used by the Office to automatically attempt retrieval pursuant to 37 CFR 1.55(i)(1) and (2). Under the PDX program, applicant bears the ultimate responsibility for ensuring that a

copy of the foreign application is received by the Office from the participating foreign intellectual property office, or a certified copy of the foreign priority application is filed, within the time period specified in 37 CFR 1.55(g)(1).

Data was not provided for this section.

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications

Checking this box will cause the application to be examined under the first inventor to file provisions of the AIA.

☐ This application (1) claims priority to or the benefit of an application filed before March 16, 2013 and (2) also contains, or contained at any time, a claim to a claimed invention that has an effective filing date on or after March 16, 2013. NOTE: By providing this statement under 37 CFR 1.55 or 1.78, this application, with a filing date on or after March 2016, 2013, will be examined under the first inventor to file provisions of the AIA.

Authorization or Opt-Out of Authorization to Permit Access

When this Application Data Sheet is properly signed and filled with the application, applicant has provided written authority to permit a participating foreign intellectual property (IP) office access to the instant application-as-filed (see paragraph A in subsection 1 below) and the European Patent Office (EPO) access to any search results from the instant application (see paragraph B in subsection 1 below).

Should applicant choose not to provide an authorization identified in subsection 1 below, applicant **must opt-out** of the authorization by checking the corresponding box A or B or both in subsection 2 below.

NOTE:
This section of the Application Data Sheet is **ONLY** reviewed and processed with the **INITIAL** filing of an application. After the initial filing of an application, an Application Data Sheet cannot be used to provide or rescind authorization for access by a foreign IP office(s). Instead, Form PTO/SB/39 or PTO/SB/69 must be used as appropriate.

1. Authorization to Permit Access by a Foreign Intellectual Property Office(s)

A. **Priority Document Exchange (PDX)**
Unless box A in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the European Patent Office (EPO), the Japan Patent Office (JPO), the Korean Intellectual Property Office (KIPO), the China National Intellectual Property Administration (CNIPA), the World Intellectual Property Organization (WIPO), and any other foreign intellectual property office participating with the USPTO in a bilateral or multilateral priority document exchange agreement in which a foreign application claiming priority to the instant patent application is filed, access to: (1) the instant patent application-as-filed and its related bibliographic data, (2) any foreign or domestic application to which priority or benefit is claimed by the instant application and its

related bibliographic data, and (3) the date of filing of this Authorization. See 37 CFR 1.14(h) (1).

B. **Search Results from U.S. Application to EPO**
Unless box B in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the EPO access to the bibliographic data and search results from the instant patent application when a European patent application claiming priority to the instant patent application is filed. See 37 CFR 1.14(h)(2).

The applicant is reminded that the EPO's Rule 141(1) EPC (European Patent Convention) requires applicants to submit a copy of search results from the instant application without delay in a European patent application that claims priority to the instant application.

2. Opt-Out of Authorizations to Permit Access by a Foreign Intellectual Property Office(s)

☐ A. Applicant **DOES NOT** authorize the USPTO to permit a participating foreign IP office access to the instant application-as-filed. If this box is checked, the USPTO will not be providing a participating foreign IP office with any documents and information identified in subsection 1A above.

☐ B. Applicant **DOES NOT** authorize the USPTO to transmit to the EPO any search results from the instant patent application. If this box is checked, the USPTO will not be providing the EPO with the search results from the instant application.

NOTE:
Once the application has published or is otherwise publicly available, the USPTO may provide access to the application in accordance with 37 CFR 1.14.

Applicant Information

of applicants: 1

The information to be provided in this section is the name and address of the legal representative who is the applicant under 37 CFR 1.43; or the name and address of the assignee, person to whom the inventor is under an obligation to assign the invention, or person who otherwise shows sufficient proprietary interest in the matter who is the applicant under 37 CFR 1.46.

Microgravity Resonance Stabilization via Spectral Mode Identification and Phase-Locked Counteractuation (HeadySpace)

(Specification and Drawings)

Applicant / Assignee	HeadySystems Inc.
Inventor	Eric Haywood
Correspondence Address	149 Remington Street Unit 425, Fort Collins, CO 80524
Entity Status	Small Entity
Government Interest	None
Attorney Docket	PPA-030
Date	January 22, 2026

Title

[0001] PPA-030: HeadySpace — Microgravity Resonance Stabilization via Spectral Mode Identification and Phase-Locked Counteractuation

Abstract

[0002] A microgravity stabilization and manufacturing quality system treats structural vibration, actuator currents, and control telemetry as waveform data. A spectral estimator identifies dominant vibration modes and cross-coupled interference among onboard subsystems (e.g., pumps, reaction wheels, compressors, tool heads, and computing workloads). A resonant null controller computes phase-locked counteractuation signals that drive active dampers or other actuators to cancel or reduce excitation of structural modes, preserving microgravity quality and improving process precision. A harmonic scheduling layer further phase-aligns periodic software and electromechanical operations to avoid exciting sensitive frequencies. The system provides a microgravity quality metric and a safety envelope that bounds actuation to maintain stability and protect hardware.

Technical Field

[0003] The disclosure relates to spacecraft and microgravity systems, including vibration suppression, spectral analysis, active damping, control theory, cyber-physical scheduling, and quality assurance for microgravity manufacturing and scientific payload operations.

Background

[0004] Microgravity manufacturing and scientific payloads are sensitive to low-amplitude vibrations generated by onboard systems such as pumps, fans, compressors, reaction wheels, robotic actuators, and periodic compute workloads.

[0005] In microgravity environments, small oscillatory forces can accumulate to degrade process precision, introduce defects, reduce measurement fidelity, and impair docking or pointing stability. Conventional vibration mitigation approaches are often static (passive damping) or tuned for a limited set of operating conditions and may not adapt to changing configurations, payload mass, or aging hardware.

[0006] There is a need for a runtime control system that detects evolving vibration modes in the frequency domain and applies phase-locked counteractuation and scheduling adjustments to maintain a stable microgravity environment while respecting safety constraints and mission operations.

Summary

[0007] A multi-sensor telemetry layer collects vibration and structural signals (e.g., accelerometers, IMUs, strain gauges) together with actuator and compute telemetry and timestamps the streams using a stable timebase.

[0008] A spectral estimator computes frequency-domain representations and identifies structural resonance modes, cross-coupled interference, and coherence among subsystems.

[0009] A resonant null controller selects one or more modes to suppress and drives active actuators using phase-locked counteractuation signals that reduce vibration energy in targeted bands while maintaining stability.

[0010] A harmonic scheduling layer optionally micro-delays periodic operations (software tasks and electromechanical cycles) to avoid exciting sensitive frequencies and to maintain constructive alignment with damping capacity.

[0011] A microgravity quality metric and dissonance alarm provide monitoring, fault prediction, and evidence for manufacturing quality and maintenance.

Brief Description of the Drawings

[0012] - FIG. 1 illustrates an example microgravity resonance control architecture including sensors, spectral estimation, mode management, scheduling, and active actuation.

[0013] - FIG. 2 illustrates an example reduction in vibration energy at dominant structural resonance modes.

Detailed Description

System Overview

[0014] In one embodiment, the system is deployed on a spacecraft, station module, free-flyer manufacturing platform, or microgravity laboratory. The system may run on an onboard computer and communicate with actuators over deterministic fieldbuses.

[0015] The system supports multiple operating modes including a learning mode (mode identification), a control mode (active cancellation), and a safety mode (bounded actuation and rollback).

Telemetry Acquisition and Timebase

[0016] Telemetry sources include inertial sensors, structural strain sensors, and motor electrical signals. Control telemetry includes commanded actuator setpoints and observed positions or currents. Software telemetry includes periodic task schedules and CPU wakeups that can excite structural modes through power and mechanical coupling.

[0017] In one embodiment, telemetry is synchronized to a monotonic timebase and resampled to a uniform cadence. Time synchronization may use an authenticated onboard clock source to preserve phase coherence across sensors.

Spectral Mode Identification

[0018] The spectral estimator computes power spectral density and cross-spectral density across sensor channels to estimate dominant frequencies and mode shapes. Short-time Fourier transforms or wavelet transforms may be used to capture changing modes as payload configuration changes.

[0019] Mode identification may include tracking of resonance frequency drift, damping ratios, and coupling coefficients between actuators and measured structural responses.

Resonant Null Control and Phase-Locked Counteractuation

[0020] For a targeted resonance mode, the controller computes a counteractuation signal that is phase-shifted relative to the measured vibration such that injected energy is

minimized and damping is maximized. The controller may implement a phase-locked loop to maintain phase alignment as the mode frequency drifts.

[0021] Actuators may include active vibration isolators, voice-coil dampers, reaction wheels, control-moment gyros, pump speed controllers, or tool-head actuators. The controller can distribute counteractuation across multiple actuators to reduce local loads and to satisfy actuator saturation constraints.

Harmonic Scheduling Layer

[0022] In addition to physical counteractuation, the system may reduce excitation by micro-delaying periodic operations. Examples include staggering pump cycles, aligning compressor starts, shifting high-current compute bursts, and coordinating tool-path segments in manufacturing.

[0023] Scheduling adjustments are bounded to preserve deadlines and mission constraints. The system may maintain a constraint set specifying maximum allowable jitter per task and maximum rate-of-change of offsets.

Microgravity Quality Metric and Evidence

[0024] The system computes a microgravity quality metric Q derived from integrated vibration energy over sensitive bands, coherence among channels, and persistence of modes. Q may be recorded alongside manufacturing batch identifiers to provide evidence of environmental quality during a process.

[0025] A dissonance alarm triggers when the system detects anomalous spectral signatures consistent with imbalance, bearing wear, loose mounts, or controller instability.

Safety Envelope and Fault Handling

[0026] The system enforces a safety envelope that bounds actuation magnitude, frequency content, and slew rate. If instability is detected, the system reverts to a safe mode that disables active cancellation and returns to passive damping configurations.

[0027] In one embodiment, all control decisions and applied offsets are logged with timestamps for audit and post-mission analysis.

Example Claims (Non-Limiting)

[0028] 1. A computer-implemented method comprising: collecting vibration telemetry from a plurality of sensors on a microgravity platform; performing spectral analysis to identify at least one structural resonance mode; computing a phase-locked counteractuation signal for the resonance mode; and driving at least one actuator with the

counteractuation signal to reduce vibration energy in a frequency band associated with the resonance mode.

[0029] 2. The method of claim 1, further comprising maintaining phase alignment using a phase-locked loop responsive to drift in the resonance mode frequency.

[0030] 3. The method of claim 1, wherein the actuator comprises at least one of an active vibration damper, reaction wheel, pump controller, compressor controller, or tool-head actuator.

[0031] 4. The method of claim 1, further comprising applying a bounded micro-delay to a periodic operation to reduce excitation of the resonance mode while preserving task correctness.

[0032] 5. The method of claim 1, further comprising computing a microgravity quality metric derived from integrated vibration energy and storing the metric as evidence for a manufacturing or scientific operation.

[0033] 6. The method of claim 1, further comprising enforcing a safety envelope that bounds actuation magnitude and disables active control upon detection of instability.

Drawings

FIG. 1 — Microgravity resonance control architecture.

FIG. 2 — Reduction of vibration energy at dominant resonance modes.

ELECTRONIC ACKNOWLEDGEMENT RECEIPT

APPLICATION #	RECEIPT DATE / TIME	ATTORNEY DOCKET #
63/965,442	**01/22/2026 05:34:59 AM Z ET**	**-**

Title of Invention

Microgravity Resonance Stabilization via Spectral Mode Identification and Phase-Locked Counteractuation (HeadySpace)

Application Information

APPLICATION TYPE	Utility - Provisional Application under 35 USC 111(b)	PATENT #	-
CONFIRMATION #	3409	FILED BY	ERIC HAYWOOD
PATENT CENTER #	74085734	FILING DATE	-
CUSTOMER #	221639	FIRST NAMED INVENTOR	Eric Haywood

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Placeholder Sheet for Supplemental Content

Application Number: 63965442 Document Date: 01/22/2026

The presence of this form indicates that the following document type was received in electronic format on the date identified above. This document is stored separately from the typical case contents which are stored in image format.

Since this was an electronic submission, there is no physical artifact folder, no artifact folder is recorded and no paper documents or physical media exist.

- Drawing

At the time of document entry (noted above):

- USPTO employees may access this supplemental content via Docket Application Viewer (DAV) or Supplemental Content Viewer (SCV).
- External customers may access this supplemental content via Patent Center.
