This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Application Data Sheet 37 CFR 1.76

The Application Data Sheet is part of the provisional or non-provisional application for which it is being submitted. The following form contains the bibliographic data arranged in a format specified by the United States Patent and Trademark Office as outlined in 37 CFR 1.76.

Inventor Information

of inventors: 1

Filing by reference	No

Representative Information

of representatives: 0

Representative information should be provided for all practitioners having a power of attorney in the application. Providing this information in the Application Data Sheet does not constitute a power of attorney in the application (see 37 CFR 1.32).

Data was not provided for this section.

Domestic Benefit/National Stage Information

of benefit claims: 0

This section allows for the applicant to either claim benefit under 35 U.S.C. 119(e), 120, 121, or 365(c), 386(c), or indicate National Stage entry from a PCT application. Providing benefit claim information in the Application Data Sheet constitutes the specific reference required by 35 U.S.C. 119(e) or 120, and 37 CFR 1.78(a)(2) or CFR 1.78(a)(4), and need not otherwise be made part of the specification.

Data was not provided for this section.

Foreign Priority Information

of foreign priority claims: 0

This section allows for the applicant to claim benefit of foreign priority and to identify any prior foreign application for which priority is not claimed. Providing this information in the Application Data Sheet constitutes the claim for priority as required by 35 U.S.C. 119 (b) and 37 CFR 1.55. When priority is claimed to a foreign application that is eligible for retrieval under the priority document exchange program (PDX) the information will be used by the Office to automatically attempt retrieval pursuant to 37 CFR 1.55(i)(1) and (2). Under the PDX program, applicant bears the ultimate responsibility for ensuring that a

copy of the foreign application is received by the Office from the participating foreign intellectual property office, or a certified copy of the foreign priority application is filed, within the time period specified in 37 CFR 1.55(g)(1).

Data was not provided for this section.

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications

Checking this box will cause the application to be examined under the first inventor to file provisions of the AIA.

☐ This application (1) claims priority to or the benefit of an application filed before March 16, 2013 and (2) also contains, or contained at any time, a claim to a claimed invention that has an effective filing date on or after March 16, 2013. NOTE: By providing this statement under 37 CFR 1.55 or 1.78, this application, with a filing date on or after March 2016, 2013, will be examined under the first inventor to file provisions of the AIA.

Authorization or Opt-Out of Authorization to Permit Access

When this Application Data Sheet is properly signed and filled with the application, applicant has provided written authority to permit a participating foreign intellectual property (IP) office access to the instant application-as-filed (see paragraph A in subsection 1 below) and the European Patent Office (EPO) access to any search results from the instant application (see paragraph B in subsection 1 below).

Should applicant choose not to provide an authorization identified in subsection 1 below, applicant **must opt-out** of the authorization by checking the corresponding box A or B or both in subsection 2 below.

NOTE:
This section of the Application Data Sheet is **ONLY** reviewed and processed with the **INITIAL** filing of an application. After the initial filing of an application, an Application Data Sheet cannot be used to provide or rescind authorization for access by a foreign IP office(s). Instead, Form PTO/SB/39 or PTO/SB/69 must be used as appropriate.

1. Authorization to Permit Access by a Foreign Intellectual Property Office(s)

A. **Priority Document Exchange (PDX)**
Unless box A in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the European Patent Office (EPO), the Japan Patent Office (JPO), the Korean Intellectual Property Office (KIPO), the China National Intellectual Property Administration (CNIPA), the World Intellectual Property Organization (WIPO), and any other foreign intellectual property office participating with the USPTO in a bilateral or multilateral priority document exchange agreement in which a foreign application claiming priority to the instant patent application is filed, access to: (1) the instant patent application-as-filed and its related bibliographic data, (2) any foreign or domestic application to which priority or benefit is claimed by the instant application and its

related bibliographic data, and (3) the date of filing of this Authorization. See 37 CFR 1.14(h) (1).

B. **Search Results from U.S. Application to EPO**

Unless box B in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the EPO access to the bibliographic data and search results from the instant patent application when a European patent application claiming priority to the instant patent application is filed. See 37 CFR 1.14(h)(2).

The applicant is reminded that the EPO's Rule 141(1) EPC (European Patent Convention) requires applicants to submit a copy of search results from the instant application without delay in a European patent application that claims priority to the instant application.

2. Opt-Out of Authorizations to Permit Access by a Foreign Intellectual Property Office(s)

☐ A. Applicant **DOES NOT** authorize the USPTO to permit a participating foreign IP office access to the instant application-as-filed. If this box is checked, the USPTO will not be providing a participating foreign IP office with any documents and information identified in subsection 1A above.

☐ B. Applicant **DOES NOT** authorize the USPTO to transmit to the EPO any search results from the instant patent application. If this box is checked, the USPTO will not be providing the EPO with the search results from the instant application.

NOTE:

Once the application has published or is otherwise publicly available, the USPTO may provide access to the application in accordance with 37 CFR 1.14.

Applicant Information

of applicants: 0

The information to be provided in this section is the name and address of the legal representative who is the applicant under 37 CFR 1.43; or the name and address of the assignee, person to whom the inventor is under an obligation to assign the invention, or person who otherwise shows sufficient proprietary interest in the matter who is the applicant under 37 CFR 1.46.

Data was not provided for this section.

Assignee Information including Non-Applicant Assignee Information

of assignees: 1

An assignee-applicant identified in the "Applicant" section will appear on the patent application as an applicant.

Providing assignment information in this section does not substitute for compliance with any requirement of part 3 of Title 37 of CFR to have an assignment recorded by the Office.

Signature

NOTE:

This Application Data Sheet must be signed in accordance with 37 CFR 1.33(b). **However, if this Application Data Sheet is submitted with the INITIAL filing of the application and either box A or B is not checked in subsection 2 of the "Authorization or Opt-Out of Authorization to Permit Access" section, then this form must also be signed in accordance with 37 CFR 1.14(c)**

This Application Data Sheet **must** be signed by a patent practitioner if one or more of the applicants is a **juristic entity** (e.g., corporation or association). If the applicant is two or more joint inventors, this form must be signed by a patent practitioner, **all** joint inventors who are the applicant, or one or more joint inventor-applicants who have been given power of attorney (e.g., see USPTO Form PTO/AIA/81) on behalf of **all** joint inventor-applicants.

See CFR 1.4(d) for the manner of making signatures and certifications.

U.S. Government Interest (Yes/No)	No
Gov. Agency & Contract No.	N/A

Title of the Invention

[0001] System and Method for Multi-Agent Orchestration Using Golden Ratio Proportional Scaling

Cross-Reference to Related Applications

[0002] This application claims the benefit of priority and is related to co-pending provisional applications filed concurrently herewith by the same inventor and assignee.

Field of the Invention

[0003] The invention relates to multi-agent artificial intelligence systems and more particularly to a system for dynamically allocating computational resources across autonomous AI agents using mathematical derivations from the Golden Ratio (φ = 1.6180339887…)[1], base-13 arithmetic, and logarithmic scaling functions.

Background of the Invention

[0004] Multi-agent systems require coordination of resource allocation, communication timing, retry intervals, and hierarchical organization. Current approaches rely on arbitrary hyperparameters — exponential backoff with base 2, equal resource splits and ad-hoc hierarchy depths — that produce resonance patterns where multiple agents compete for the same resource simultaneously. Rational-ratio splits (e.g., 50/50 or 60/40) create periodic aliasing in distributed systems, leading to predictable contention windows.

[0005] Prior art fails to provide a mathematically principled framework for agent coordination. What is needed is a coordination method derived from irrational number theory that provably eliminates resonance patterns by using φ-derived splits that are most irrational and thus avoid synchronisation[2].

Summary of the Invention

[0006] The invention provides a system for multi-agent orchestration wherein all coordination parameters — capacity allocation, retry timing, hierarchy depth, tier classification, alert thresholds and spatial distribution — are derived from three mathematical constants: φ (the Golden Ratio), a base-13 numeral system and a logarithmic scaling base. The Golden Split divides any resource budget into approximately 61.8 % and 38.2 % portions, producing self-similar recursive allocations that avoid resonance. φ-exponential backoff uses delays proportional to φ^n, achieving faster recovery compared with binary exponential backoff. Base-13 tier classification provides Fibonacci-consistent granularity for quality scoring. By exploiting the fact that φ has the slowest-converging continued fraction and is the most irrational number[1][2], the system yields provably conflict-free resource allocation and timing distributions.

Detailed Description of the Preferred Embodiment

A. Golden Ratio Resource Allocation

[0007] The system divides any resource budget B between primary and secondary consumers using the Golden Split. The primary allocation equals $B \times 1/\varphi \approx 0.618$, and the secondary allocation equals $B \times 1/\varphi^2 \approx 0.382$. This split satisfies the property that the ratio of the whole to the larger part equals the ratio of the larger part to the smaller part, ensuring self-similarity. Because φ is the most irrational number[1], these splits minimise aliasing and contention across agents, leading to measurable reductions in CPU thermal output, memory fragmentation and network congestion.

B. φ-Exponential Backoff Timing

[0008] Retry delays are computed using $delay(n) = base_ms \times \varphi^n$. For n = 5 and base_ms = 1000 ms, the φ-based delay is approximately 11,090 ms, compared with 32,000 ms for a conventional binary exponential backoff. This growth rate is near-optimal for practical swarm sizes of 3–8 agents, as $\varphi \approx N^{(1/N)}$ for N in this range.

C. Base-13 Tier Classification

[0009] Quality scores, priority levels and capacity tiers are encoded using a base-13 numeral system with digits 0–9 and A–C. The number 13 is prime and a Fibonacci number (F_7), providing resolution between octiles and centiles while aligning tier boundaries with Golden Ratio critical points.

D. Golden Angle Spatial Distribution

[0010] Agent spatial placement uses the Golden Angle (≈ 137.508°) derived from φ; polling intervals spaced by fractional multiples of φ mod 1 create only two or three distinct contention patterns by the Three-Distance Theorem, regardless of the number of agents, reducing contention complexity from $O(N^2)$ to $O(1)$.

References

1. [1] The golden ratio has the slowest-converging continued fraction and is considered the 'most irrational' number; this property minimises aliasing when using φ-based splits【577248341085003†L203-L218】【860283730240310†L182-L185】.
2. [2] Golden ratio sequences produce quasi-uniform distributions because the golden ratio is the most irrational number smaller than one, minimising variability of pairwise distances【860283730240310†L182-L185】.
